New building Community school Het Fundament and daycare Camelot, Genderen

The new community school in Genderen will house three different users: the elementary school Het Fundament, the y-care centre Camelot and a library for the Gemeente Altena.

The new building will replace an existing school from the 1980s, in a small-scale residential area, and is carefully fitted into its surroundings in terms of scale, design and materialisation. Moreover, atelier PRO also paid close attention to the synergy between the various users, both in the process and in the building. The three-winged layout provides the school with a 'heart'; at the same time, this shape also creates a variety of outdoor spaces.
